

Retail Sales Performance Dashboard Business Insights Report

Executive Summary

This report summarizes key business insights derived from the Retail Sales Performance Dashboard developed in Power BI. The dashboard analyses sales transactions from January 2024 to September 2024 and provides interactive reporting on sales performance, customer behaviour, regional trends, and product performance.

Metric	Value
Analysis Period	January 2024 – September 2024
Original Records	100,000
Records After Cleaning	90,000
Total Sales	\$49.52M
Transactions	90K
Average Sales	\$550.17
Average Discount	24.99%
Average Customer Age	43 Years

Overall Sales Performance

The business generated \$49.52M in revenue across 90K transactions, demonstrating strong sales activity during the analysis period.

1. Customer Insights

Customers aged 46+ contributed the highest revenue, making them the most valuable customer segment. Revenue distribution across customer genders remained balanced.

2. Product Performance

Revenue was spread across multiple product categories, indicating a diversified sales portfolio and reduced dependence on a single category.

3. Regional Analysis

Revenue was spread across multiple product categories, indicating a diversified sale portfolio and reduced dependence on a single category.

4. Sales Representative Analysis

Top-performing sales representatives generated approximately \$17K–19K in sales, indicating consistent sales performance across the team.

5. Monthly Trend

Sales remained relatively stable from January through August. September recorded lower sales within the available dataset. Since the data ends in September, no conclusions are drawn beyond the available period.

Conclusion

The dashboard enables stakeholders to monitor key performance indicators, identify business trends, evaluate customer behaviour, and support data-driven decision-making through interactive visual analytics.
